DEPARTMENT OF HINDI

Topic: Premchand Katha Sahitya Main Dalit Bimarsh Date: 18.02.2020
Resource Person: Dr. Bijay Ku. Mohanty

Synopsis

A Departmental seminar has been organized on 18th feb. 2020 Tuesday at 1:30 P.m. with the faculty and students of Hindi department. Prof. Dr. Bijay ku. Mohanty the H.O.D of P.G. Department of Hindi F.M. Autonomous College Balasore attended the seminar as resource person. He is not only a professor but also a writer, translator and poet who has been awarded by the hon'ble president of India. The topic of discussion was "PREMCHAND KATHA SAHITYA ME DALIT BIMARSH". 24 students participated in this seminar.

OBJECTIVES:-

1. The seminar was organized to revise elements of DALIT BIMARSH of absurd to the students. Even ,before the term DALIT
 2. LITERATURE came to be in use in 1958. We had been blessed with a pioneer who helped us to understand how our land of non violence is periodically jarred by exclusion, discrimination and exploitation of DALITS or untouchables.
 3. It aims at giving scope to the students for presenting papers of their own preparation.
 4. It creates a golden facility for participants to synthesize the materials for an innovative idea for them.
 5. The overall interaction helped for eternal contribution of Premchand to the DALIT LITERATURE.
 6. The keynote was presented by the faculty member Dr. Kalyani Dash (lecturer) just often the welcome address was delivered by Dr. K. Dash (H.O.D of dept.).
- The topic:- "PREMCHAND KATHA SAHITYA ME DALIT BIMARSH " was introduced for discussion. The great poet, writer, translator, novelist Munsi Premchand who is known as the king of novel. He believes that novel means the human history. 'Satyameva Jayate' – Truth alone triumphs, these words embellish our national emblem, however the question is what is our truths as Indians? Is it is the paradox that on even being the world's largest democracy, India is an abode of perennial caste system?

Synopsis:

Judicial Activism is the foster child of our judicial organ. It operates beyond the ambit of "Procedure Established by law". Exigency of Socio- Economic and Political scene propels Indian judiciary walk along the line "Due process of Law", the established constitutional provision of American judiciary. The decline of legislature and the excesses of executive in the areas of violation of Human Rights and constitutional norms provided ground to the judicial organ to walk beyond structural institutional and formal nature of works. This seminar will be specially devote to the prospect of judiciary as third chamber of legislature and as on organ to fill the gap created by the non-activity of non-judicial organs. The seminar is attended by 37 students covering +3 1st, 2nd, 3rd year Pol-Science Honors students.

Topic : **Fundamental Rights** Date- 07.09.2015
Resource Person : **Dr. Gouri Shankar Panda, Reader in Political Science**
Dr. J.N. College, Rasalpur, Balasore, Odisha

Synopsis:

Fundamental Rights are fundamental for the governance of the country. As a conscience keeper of the constitution, these Rights serve the purpose of its prototype that Magnacarta and bill right of Great Britain. The sum totals of fundamental right enshrined in the constitution are the semblances of Rights as placed in the universal declarations of Human rights 1948. Since the very inception post-independence a tug of war continued in between parliament and the Supreme Court in regard to the superiority and inavailability of Rights. Parliamentary supremacy prevailed over the judiciary in several cases and the judiciary stood as a citadel in several cases confronting state and individuals. This seminar will be productive one in the matter of fundamental rights and related issue. 40 students participated in the seminar.

Gopalpur College, Gopalpur, Balasore, Odisha

Synopsis:

Secularism which derived from the word 'Seculam' specifically meant for earthly and not connected to heavenly objects. It treats all man as citizens with Plethora of freedom and keeps religion at the Bay of Private affairs. Indian secularism believes in 'SARBA DHARMA SAMANWAYA' and upliftment of all. Despite a secular constitution India and its political elites are in many occasions attributed with Pseudo secular and not sticking to the core meanings. India a multi-cultural country can in no way able to succeed and go ahead with exclusive nature of governance and polity. Equality and im-partial treatments to all sects are necessary. 41 students participated in the seminar.

**Resource Person : Dr. Bhagaban Prusty
Sidheswar College, Amarda Road, Balasore**

Synopsis:

India and its composite culture are deeply related to Human values and Human Rights. Post 2nd world war and the follow up developments in the universal Declaration of Human Rights in 1948, provided fertile ground for imbibing canons of Human Rights in the Part-III of the constitution. Fundamental Rights portray the human liberty and equality enshrined in U,N charter. The ancestral Vedic and upanishadic values very akin to present day Human Rights get clouded by the changing socio-economic, political and cultural decline. Post-independent India is moving across the surface of cultural decline, the offshoot of Human Rights violation. All nefarious attempts of violation are to be prevented with stern enforcement measures. 42 students participated in the seminar.

UGC SPONSORED NATIONAL SEMINAR IN SANSKRIT
(28.01.2017 and 29.01.2017)

UGC sponsored national seminar in Sanskrit was organised by the Department of Sanskrit, Gopalpur college, Gopalpur, Balasore in collaboration with Bagaban Chandra Sanskrit Collge, Jgeswarpada, Balasore and it was inaugurated by Dr. Brajakishore swain Retd. Prof. And H.O.D of Dharma Sastra, Sri Jagannath Sanskrit University Puri at 10.30 A,M on 28.01.2017 (Saturday). Dr, Narendra Prasada Bugudei principal, Gopalpur college, president in the inaugural session. Dr. Jadunatha

Mishra, H.O.D Sanskrit introduced the guest in Sanskrit language and Prof. Rabindra Kumar Sahoo, the organising secretary of the seminar read out the objective of the seminar topic i.e. "concept of Shraddha in Aryan Culture". Along with the synopsis of the seminar.

The chief speaker Dr. Arjun Ranjan Mishra, H.O.D IN Sanskrit of Biswavarati Santiniketrana focused on the concept of shraddha in vedic period enumerating different quotations for vedic literature. Prof. Brajakishore Sain, chief guest stressed on the concept of shraddha in human culture. He said in Rigved, it is mentioned that the dead parents (pitrs) have relation with the deities and Gods as they receive hobbies in the sacrifice concentrated simultaneously. The honourable speaker Dr. Sitansu Vusan Panda, H.O.D Dept. Of Dhrama shastra, Rastriya Sanskrit Vidya pittha Tirupati focused on Indian culture which is not only practised by Aryans but also the Dravidians and others.

First inaugural session ends at 2.30 p.m with vote of thanks to the chair persons and delegates.

In the first technical session Dr. Arjun Ranjan Mishra presided over the meeting and Dr. S.B. Panda was the rapporteur. Dr. Madhusudan Mishra was the chief speaker and Prof. Nirmal Chandra Panda was honourable speaker. Four scholars red out research papers on the topic and few questions and answers were discussed.

In the second technical session Dr. Madhusudan Mishra controller of Sri Jagannath Sanskrit Viswa Vidyalaya presided over the meeting and Dr. Basant kumar Mishra H.O.D Sahitya dept. Of S.J.S.V

was the co-ordinator. Seven papers were presented and few question answers were discussed in this session.

29.01.2017

Dr. Narendra Prasada Bugudei, the Principal of the College presided over the meeting. Dr. Basant Kumar Mishra H.O.D Sahitya dept. Of S.J.S.V graced the chair of chief guest and Prof. Kailash Chandra Mishra graced as the chief speaker. Dr. Jadunath Mishra H.O.D spoke on the successful conduct of the seminar and Prof. Rabindra Kumar Sahoo, the organising secretary discussed on the fulfillment of the objective of the seminar. Dr. Basant Kumar Mishra praised the whole activities. Dr. Kailash Chandra Mishra spoke on the future of the Indian culture, especially the observation of rituals and Shraddhas which can unite the Indians and not to follow blindly the foreign culture. A few students shared their two days experience. They expressed their gratitude to all who have taken pain in coming such a rural college and sharing their views for them. Dr. Narendra Prasad Bugudei, the Principal and chair person of the session spoke with heartily gratefulness to the scholars and resource persons and finally the organising secretary extended vote of thanks. The scholars came from different colleges also expressed thankfulness to this institution and to the UGC for funding to organise such seminars.

Department of Chemistry

Dated : 20.12.2016
Topic : Radial and Angular wave function
Resource person : Dr. Satyabrata Dash, Reader in Chemistry
U.N. College, Soro, Balasore

Synopsis:

An orbital is a mathematical function called a wave function that describes an electron in an atom. Radial wave function for a given atom depends only upon the distance r from the nucleus. Angular wave functions depend only upon the direction and in effect describe the shape of an orbital. The wave function is a complex value of probability amplitude. The most common symbols for wave functions are the Greek letter ψ . Wave function mathematically describes the wave characteristic of a particle. Each wave function has two parts, the radial part which changes with distance from the nucleus and angular part which changes correspond to different shape.

The Seminar is attended by 10 students covering +3 first year Chemistry honors student.

Department of Chemistry

Date : 23.08.2017
Topic : Bragg's Equation
Resource person : Somanath Sahu , Reader in Chemistry
Khaira College , Khaira, Blasore, Odisha

Synopsis:

Bragg's law was introduced by Sir W.H Bragg and his son W.L. Bragg . this law states that when the X-Ray is incident onto a crystal surface, it's angle of incidence will reflect back with a same angle of scattering .Bragg's law provides the condition for a plane wave to be diffracted by a family of lattice plane $2d\sin\theta = n\lambda$,where d is the lattice spacing, θ is the angle between the wave vector of the incident plane wave, lambda is the wavelength and n is the integer. Moving particles including electron, proton and neutron have an associated wave length, called as de Broglie wavelength. A diffraction pattern is obtained by measuring the intensity of scattered waves as a function of scattering angle. Very strong intensities known as Bragg's peak are obtained in the diffraction pattern at the point when the scattering angles satisfy Bragg condition.

The Seminar is attended by 22 students covering +3 first year and second year Chemistry honors students.

Title : Molecular Shape of noble gas compounds
Resource person : Sumanta Kumar Dey, Lect. in Chemistry
A.B. College, Basudevpur, Bhadrak

Synopsis:

Noble gas compounds are chemical compounds that includes the elements from noble gas ,group-18 of the periodic table. In 1962,Neil Bartlett, who was first discovered the noble gas compound $\text{Xe}[\text{PtF}_6]$.The first binary noble gas compound were reported later ,Bartlett synthesized XeF_4 by subjecting a mixture of xenon and fluorine to high temperature. Xenon mainly form noble gas compounds like XeF_2 , XeF_4 , XeF_6 , XeOF_2 , XeO_3 etc. Xenon hexa fluoride has distorted

octahedral geometry. similarly XeF_2 , XeF_4 , XeOF_2 , XeO_3 have linear, square planar ,T-shape and pyramidal geometry respectively. In all these compounds, Xenon atom carries lone pair electron, so that geometry of these molecules becomes irregular. Some of ionic noble gas compound of Xenon are $[\text{XeF}_3]^+$, $[\text{XeF}_5]^+$, $[\text{XeF}_5]^-$, $[\text{XeF}_8]^{2-}$ etc.Krypton also makes compounds mixing with fluorine as KrF_2 , KrF_4 etc.noble gas forms a special complex called clathrates , such as quinol clathrates,hydrate clathrates.Clathrate compounds of Ar,Kr,Xe have been prepared by entrapping these gases in the cages of water,phenol,p-cresol,quinol etc.

Title : Designing of Fusion reactor, the future solution of Energy Crisis

Resource person : Somanath Sahu , Reader in Chemistry
Khaira College , Khaira, Blasore, Odisha

Synopsis:

The nuclear fusion reaction generates the energy in the interior of sun. The vision of a power producing fusion reactor based on controlled thermonuclear reaction emerged more than a quarter of a century ago, and the remarkable progress has taken place in recent year. Unlike most of other energy sources, the fuel available to fusion reactors is almost limitless. Fusion reaction involving deuterium and tritium nuclei, the fuel heated to a temperature, in excess of 10 million degrees centigrade. At such temperature, the fuel

becomes fully ionized leaving behind a collection negatively charged particles referred as plasma. Nuclear fission proceeds through a chain reaction. The energy available from a fusion reactor is sustainable for the future.

Title : Save Ozone Layer and Save our Mother Earth
Resource person : Dr. Satyabrata Dash, Reader in Chemistry
U.N. College, Soro, Balasore

Synopsis:

Ozone layer is a region of earth stratosphere that absorbs most of the Ultra violet radiation. It contains a high concentration of ozone. Ozone is the triatomic oxygen atom. Ozone layer was discovered by French physicist Charles Fabry and Henry Buisson. The ozone layer absorbs 97-99% of the U.V. light, which otherwise would potentially damage exposed life forms near the surface. Ozone

layer was being depleted by chemicals like mainly chlorofluorocarbon. Ozone layer depletion causes the skin cancer in humans and other ecological problems. Ozone layer can be depleted by free radical catalyst including nitric oxide, nitrous oxide, atomic chlorides etc. Ozone depleting substance like chloro fluoro carbon has a significant positive contribution to the fight against climate change. Ozone depletion is greatest at the south pole. It occurs mainly in late winter and early spring and peak depletion occurs in early October. In 1987, to address the destruction of the ozone layer, the international community established the Montreal protocol on ozone depleting substances. It was the first international treaty to be signed by all countries in the world.

The Seminar is attended by 40 students covering +3 first year and second year and third year Chemistry honors students.

Title : Twelve Principles of Green Chemistry
Resource person : Pratap Kumar Kar , Lect. in Chemistry
Jambeswar College, Garshang, Balasore
Date: 28.11.2019
Synopsis:

Green chemistry is the design of chemical products and processes that reduce or eliminates the use or generation of hazardous substances .Green chemistry applies across the life cycle of a chemical product,including it's design ,manufacture ,use and unlimited disposal. Important twelve principles of green chemistry-

- it is better to prevent waste than to treat waste after it is formed.
- synthetic methods should be designed to maximize all the materials used in the process into the final product.
- Synthetic methodologies should be desined that possess little or no toxicity to human health and the environment
- Chemical product should be designed to preserve efficacy of function.
- The use of auxiliary substances should be made unnecessary wherever possible.
- Energy requirement should be recognized for their economic impact and should be minimized.
- A raw material of feed stock should be renewable rather than depleting.
- Unnecessary derivatisation should be avoided wherever possible.
- Catalytic reagents are superior to stoichiometric reagents.
- Chemical products should be designed so that at the end of their function , they do not break down in to innocuous degradation product.
- Analytical methodologies need to be further developed to allow for real time.
- Substances used in a chemical process should be chosen so as to minimized the potential for chemical accidents.

The Seminar is attended by 22 students covering +3 first year and second year Chemistry honors students.

Title : Nomenclature of Complex organic Compounds
Resource person : Dr. Surendra Nath Mohanty, Retd. Principal,
B.J.B., Junior College, Bhubaneswar
Dated 12.02.2020

Synopsis:

The writing of name of an organic compound scientifically called as nomenclature of organic compound. It is done by two system such as common system and IUPAC system. In common system, there is no specific rules and regulations. But in IUPAC system, there are certain rules. In this system, there is a sequence i.e. prefix-word root-primary suffix- secondary suffix. Prefixes are used for the substituent.

Word root is number of carbon atoms present in the longest principal carbon chain like meth, eth, prop etc. for carbon atoms 1,2,3 respectively. Primary suffixes represent the type linkage between carbon atoms in the longest carbon chain. Primary suffixes are ane, ene, yne for carbon single bonds, double bonds, triple bonds respectively. Secondary suffixes represent the major functional groups like aldehydes, carboxylic acids, ketones, alcohols etc. Locants are used to represent the position of substituent's, primary suffixes or functional groups.

The Seminar is attended by 40 students covering +3 first year and second year and third year Chemistry honors students.

Title : Thermocouple
Resource Person : Mr. Shridhar Behera

Synopsis

Thermocouple is a device which converts thermal energy into electrical Energy. A thermocouple comprised of at least two metals joined together to form two junctions. One is connected to the body whose temperature is to be measured. This is hot or measuring junction. The other junction is connected to the body of known temperature, this is cold or reference junction. Therefore thermocouple measures unknown temperature of the reference to the known temperature of the other body.

Working Principle

It mainly depends on three effects namely Seebeck, Peltier, and Thomson.

Advantages

- ❖ Accuracy is high.
- ❖ Thermal reaction is fast.
- ❖ Operating range of temperature is wide
- ❖ Cost is low and extremely consistent.

Application

- ❖ These are used as the temperature sensors in thermostats in offices, homes and business.
- ❖ These are used in industries for monitoring temperature of metals in iron, aluminum and metal.

The seminar is attended by 16 students covering +3 1st year physics honours students.

Title : CRO Date : 28.10.2017
Resource Person : B.C. Prusty

Synopsis

The cathode Ray oscilloscope is an electric test instrument. It is used to obtain waveforms when different input signals are given. The oscilloscope observes the change in electrical signals overtime, thus the voltage and time describe a state and it is continuously graphed beside a scale. By seeing the wave form, we can analyse some properties like amplitude, frequency, rise time, distortion, time interval etc.

Working

The working of CRO is based different system like vertical deflection system, horizontal deflection system.

Application

It is used to measurement of voltage and current.

Uses

It can display different types of wave forms.

It can measure short time interval.

The seminar is attended by 30 students covering +3 1st year, 2nd year Physics Honours student.

Title : Theorem Relativity
Resource Person : Mr. Chandan Kumar Nayak

Synopsis

The theory of relativity usually encompasses two interrelated theories by Albert Einstein special theory of relativity and general theory of relativity. Special theory of relativity applies to all physical phenomena in the absence of gravity. General relativity explains the law of Gravitation and its relation to the forces of nature. It is applied to the cosmological and astrological including astronomy.

Advantages

The theory explains the behavior of objects in space and time and it can be used to predict everything from the existence of blank holes to light belong due to gravity to the behavior of the planet mercury in its orbit.

The seminar is attended by 28 students covering +3 1st year, 2nd year Physics Honours student.

Title : Space wave Propagation
Resource Person : Amar Ballav Panda

Synopsis

Space wave propagation is defined for the radio waves that occur within the 20 km of the atmosphere that troposphere comprising of a direct and reflected waves. These wave also known as tropospheric propagation as they can travel propagation as they can travel directly from the earth's surface. It is also known as line of sight propagation as the signals are sent in a straight line from the transmitter to the receiver.

Application

- ✚ It is used in a line of sight communication and satellite communication.
- ✚ It is used in a Radar communication.
- ✚ It is used in a Microwave lining.

Limitations

These waves are affected by the curvature of the earth.

The seminar is attended by 41 students covering +3 1st year, 2nd year and 3rd year Physics Honours student.

Title : Laser and its application
Resource Person : Pravat Ranjan Das

Synopsis

Laser is a device that amplifies or increases the intensity of light and produces highly directional light. Laser not only amplifies or increases intensity of light but also generates the light. Laser emits light through a process called stimulated emission of Radiation which amplifies or increases the intensity of light. Some laser generated visible light but others generate ultraviolet or infrared rays which are invisible.

Principle

In laser photons are interacted in three ways when atoms that absorption of radiation, spontaneous emission and stimulated emission.

Types of Laser

Laser are classified into 4 types

1. Solid state laser.
2. Gas laser
3. Liquid laser
4. Semiconductor laser.

Application

- ❖ Laser in Medicine
- ❖ Laser in communications
- ❖ Laser in Industries.

The seminar is attended by 39 students covering +3 1st year, 2nd year Physics Honours student.

Title : Gravity waves
Dated : 07.11.2019
Resource Person : Rupak Kumar Behera

Synopsis

Gravitational waves will not allow us to test the predictions of General relativity in regions of strong gravity but will also serve as a tool to expand our understanding of the universe. Direct observations of Gravitational waves are being pursued by an international network of advanced laser inter-perometric detectors.

Gravitational waves are disturbances in the curvature of space time generated by accelerated masses that propagate as waves outward from their surface at the speed of light.

The seminar is attended by 35 students covering +3 1st year, 2nd year Physics Honours student.

DEPARTMENT OF PHYSICS

Title : Cyclotron
Resource Person : Amar Ballav Panda
Dated: 10.01.2020

Synopsis

Cyclotron is a device used to accelerate charged particles to high energies. It works on the principle moving normal to a magnetic field experiences magnetic force due which the particle moves in a circular.

Limitations

- ❖ Cyclotron cannot accelerate uncharged particles like neutrons.
- ❖ It cannot accelerate electrons because of its small mass.
- ❖ It cannot accelerate positively charged particle with large mass due to relativistic effect.
- ❖ It is suitable for accelerating heavy charged particle.
- ❖ It is not suited to very high K.E.

Uses

- ✚ The high energy particles produced in a cyclotron are used to bombard nuclei and study the resulting nuclear reaction and investigate nuclear.
- ✚ It is used to implant ions into solids and modify their properties or even synthesis new materials.

The seminar is attended by 38 students covering +3 1st year, 2nd year Physics Honours student.

Topic: - Blood Composition and Its function

Dt. 15/10/2017

Resource person :- Mrs. Swadhina Padhiary

**Lect. In zoology , Saraswata Mahabidyalay ,
Anantapur , Balasore**

Blood is modified liquid connective tissue as the cellular components are separated tissue by a considerable amount of liquid substance called plasma. In human body it is about 7% of total body weight which performs many important functions within the body including supply of oxygen to tissue . supply of nutrients and removal of wastes and immunological function. This seminar is most essential for the students for their future study and field of research and pathological study in future.

This seminar is attended by 24 numbers of students comprising both +3 1st yr. sc. ,+3 2nd yr. sc. and +3 3rd yr. sc. of Zoology Department.

Topic:- Oxidation of fatty Acid

Dt :- 22/01/2019

Resource person: - Mrs. Swadhina Padhiary

Lect. In zoology , Saraswata Mahabidyalay ,

Lipids are a group of naturally occurring organic compounds there are soluble in non-polar organism solvent but soluble in water. They are composed of C, H and O in form of fatty acids and glycerol. Mitochondrial oxidation of fatty acid takes place in the three stages. In first stage in β -oxidation of fatty acid undergo oxidative of successive two carbon in 2nd stage of fatty acid oxidation. The acetyl CoA are oxidized to CO₂ in the citric acid cycle . These are also takes place in the mitochondrial matrix. Acetyl CoA derived from glucose via glycol sis and private oxidation.

This seminar will help the students for their future research work and study of biochemistry. This seminar is attended by 28 numbers of students comprising both +3 1st yr. sc. ,+3 2nd yr. sc. and +3 3rd yr. sc. Of zoology Deptt .

Topic: - Coral and Coral reefs

Dt :- 04/11/2019

Resource person: - Mrs. Swadhina Padhiary

Lect. In zoology, Saraswata Mahabidyalay , Anantapur , Balasore

Synopsis

Coral is a deposite of calcium carbonate formed by Coellenterates. They belongs to class Anthozoa and hydrozoa. True story corals belongs to order medriporaria. The coral polyp secrets an epidermal calcareous skeleton. The carbonate secreting epidermal cells called calicoblasts. The skeleton of single polyp called corallite. A group of corallite of entire colony in called corallum.

Coral reef is a ridge of calcium carbonate in the sea having its upper surface and it is chiefly produced by corals. This seminar will help the students for their economical study in future. This seminar is attended by 30 numbers of students comprising both +3 1st yr. sc. ,+3 2nd yr. sc. and +3 3rd yr. sc. Zoology hons .
